

Month 3 Daily Diary – Live Project Work (React.js / Next.js Internship)

Day 1

Worked on understanding the existing live project structure and folder organization. Explored reusable components, API service structure, routing flow, and dashboard modules in React.js and Next.js.

Day 2

Implemented responsive UI components using Tailwind CSS and Bootstrap. Worked on fixing alignment and spacing issues for dashboard cards and tables.

Day 3

Integrated REST APIs into frontend components using Axios. Handled API responses and displayed dynamic data inside tables and cards.

Day 4

Worked on authentication flow and token handling in the project. Tested protected routes and role-based access functionality.

Day 5

Created reusable InfoCard components for displaying dynamic user and company information. Added conditional rendering and responsive layouts.

Day 6

Worked on CRUD operations for admin modules. Implemented create and update forms with validation and API integration.

Day 7

Fixed UI bugs related to mobile responsiveness and table overflow issues. Improved overall user experience of dashboard pages.

Day 8

Implemented filtering and sorting functionality in data tables. Optimized rendering for large datasets.

Day 9

Worked on pagination implementation for API-based tables. Added dynamic page navigation and limit handling.

Day 10

Integrated status labels and conditional styling based on API response values. Improved readability of dashboard records.

Day 11

Worked on role-based access control (RBAC) functionality. Restricted UI actions according to different user permissions.

Day 12

Implemented reusable modal components for delete confirmations and update actions. Added proper error handling and validations.

Day 13

Worked on profile detail pages and dynamic routing using Next.js. Displayed API-based user information dynamically.

Day 14

Fixed bugs related to undefined state values and API response handling. Improved state management using Zustand.

Day 15

Worked on breadcrumb navigation and page header management for better user navigation across modules.

Day 16

Integrated date and timezone formatting utilities for displaying user-specific timestamps dynamically.

Day 17

Worked on image upload preview handling and fallback image rendering for missing profile pictures.

Day 18

Improved reusable component structure and optimized code for better maintainability and readability.

Day 19

Worked on form validation and controlled components using React hooks. Added proper input validations and error messages.

Day 20

Integrated export functionality for table data. Tested CSV and Excel export behavior for different modules.

Day 21

Worked on dashboard analytics cards and API-based count rendering. Improved loading states and UI feedback.

Day 22

Implemented loader and skeleton components for better user experience during API calls.

Day 23

Fixed issues related to state persistence and local storage handling using Zustand middleware.

Day 24

Worked on responsive sidebar navigation and menu handling for desktop and mobile views.

Day 25

Integrated dynamic breadcrumbs and back navigation functionality across dashboard pages.

Day 26

Worked on debugging API integration issues and improved error handling using try-catch methods.

Day 27

Optimized API calls and reduced unnecessary component re-renders for performance improvement.

Day 28

Tested different modules and fixed UI inconsistencies in cards, forms, and tables across multiple screen sizes.

Day 29

Worked on final testing of admin panel modules and verified CRUD operations with backend APIs.

Day 30

Reviewed completed tasks, optimized project structure, fixed remaining minor bugs, and documented daily project learnings and implementation details.
